transport logistic: find complete solutions at the FleetBoard stand

- **Get first-hand information about attractive new products like Mass Memory Download and Truck Navigation**
- **Also on board: Mercedes-Benz CharterWay, Mercedes-Benz Bank and Dornier Consulting**

Stuttgart/Munich – Truck Navigation, trip optimisation and Tachomanagement are fantastic tools for fleets and schedulers. Once you've used them, you'll never want to go without them again. Daimler FleetBoard invites visitors to this year's **transport logistic** from **12 to 15 May in Munich** to take a close look at the promising telematics services for fleet managers and operations schedulers. We are easy to find at **stand no. 201/302 in hall A6**, right at the East entrance, the same location as in past years. Co-exhibitors Mercedes-Benz CharterWay, Mercedes-Benz Bank and Dornier Consulting also will be giving presentations of their products and services. One visit will provide you with inspiration for the economic and fuel-efficient organisation of your daily business operations. The FleetBoard stand is thus affords an ideal platform in demanding times to get solution-focussed practical recommendations and exploit the value of your transport services.

The new FleetBoard DispoPilot, including Truck Navigation, can be ordered immediately and will be demonstrated together with functions like barcode scanning, target-actual comparison of packages and electronic signature.

A second highlight is the automated Mass Memory Download from the new digital tachograph based on the TACHOready standard.

TACHOready means that FleetBoard telematics systems can read out, transmit and store data from mass storage devices and driver cards and provide it for analysis. And this all functions without having to insert the company card in the vehicle. So international fleets in the European long-haul freight business can look forward to having more time to focus on the basics.

Daimler FleetBoard GmbH is thus the first provider of telematics-based services in Europe to enable meeting all legal documentation and archiving requirements applying to driver card and mass storage unit data. Company cards can be kept at the company headquarters, and vehicles can stay in the field instead of having to return to base for the downloads from mass storage units and driver cards. The data is stored in the secure FleetBoard Service Centre so that additional IT investment is unnecessary.

About FleetBoard

Daimler FleetBoard GmbH was established in 2003 as a wholly owned subsidiary of Daimler AG and currently has over 140 employees. The company combines many years of experience in the truck sector with a wide range of IT know-how in order to support the freight-forwarding and logistics industry with telematics-based internet services. Since launching its FleetBoard services in 2000, the company, which is certified according to DIN ISO 9001:2000, has installed its systems in over 50,000 trucks operated by more than 1100 freight-forwarding companies. The company has its registered office in Stuttgart, Germany. FleetBoard sales representatives, who are experts in telematics, can be found throughout the whole of Europe as well as in the Middle East, South Africa and Brazil. Daimler FleetBoard is growing all the time and is constantly expanding its range of products and services, with the result that refinancing of the initial cost of the hardware is possible within 12 months. With market-leading standard systems and its own computer centre, the company provides clearly understandable and future-proof solutions which can easily be integrated into existing freight-forwarding programs.
